The McAfee Site Advisor is the most sophisticated web site performance and problem detection tool on the market today. With the Site Advisor you can prevent web site problems and the possible loss of business, with a proactive approach that combines technical analysis, behavior analysis and other factors to

What's New in the?

----------------------- A tool that makes it easy and safe to access Truecrypt encrypted drives and containers. Features: * Automatic backup of files (i.e., encrypted) * Encrypt files and folders (and extra spaces) * Disks, partitions, folders, and hard drives can be mounted as Truecrypt drives You might be familiar with Truecrypt because it is used to create hard-to-crack encrypted volumes on Windows. As an alternative to Truecrypt, this tool is useful if you want to mount and explore encrypted drives directly from Windows without using Truecrypt. Containers, such as containers with passwords, are well known for their security and easy-to-use applications. But they often require special tools and software to open them. With TruecryptMounter, you can mount and explore such containers directly from Windows without the need for special software. And since Truecrypt volumes can reside inside any other file, this application can also mount those and other file-based containers to explore directly from Windows. Truecrypt volumes are the usual files such as directories and archives, and are created using the Truecrypt container format. Truecrypt containers, such as those used to store passwords, are not ordinary files; therefore, they are more difficult to deal with. TruecryptMounter is able to mount and explore containers and volumes directly from Windows without the need for any special software. You will be able to see and open Truecrypt containers (and other files) without them requiring any special software and passwords. The software allows you to control the encryption strength and metadata as well as other features and settings that you might want. Truecrypt volumes/containers are usually created on the fly when you use the Truecrypt application. But you can create them manually by booting to the Windows operating system, and then starting the Truecrypt application. Or if you have an existing volume/container, you can add them in TruecryptMounter without the need to boot to the Windows operating system. In this article, we will look at how to use TruecryptMounter to mount and explore Truecrypt volumes/containers, and how to open containers without a password. It is possible to use TruecryptMounter to mount and explore Windows partitions with Truecrypt volumes. But truecryptMounter does not support this right now. This article

System Requirements:

Minimum: OS: Windows 7 x64 (32-bit only) Processor: Intel Core 2 Duo E6300 or AMD Athlon X2 Dual-Core QL-64 Memory: 3 GB RAM Hard disk space: 7 GB Graphics: DirectX 11.0 with Shader Model 5.0 or newer DirectX: Version 9.0c (reduced API profile) or higher Input device: Mouse or game controller Network adapter: Broadband Internet connection Display: 1024 x 768 native resolution
